

VACCINES

**KEEP KIDS WITH
KIDNEY DISEASE
HEALTHY!**

Childhood vaccines can help prevent:

- **Measles:** very contagious and can cause high fever and brain injury
- **COVID:** can result in trouble breathing or inflammation of the heart
- **Chickenpox:** can lead to pneumonia
- **Whooping Cough:** can cause breathing failure in babies
- **Polio:** can cause paralysis

Each of these diseases can be especially dangerous for kids with kidney disease.

Talk to your doctor today about vaccines for your child!
