

# IS YOUR CHILD WAITING FOR A TRANSPLANT?

Vaccines are  
recommended by all  
transplant programs.

Vaccines can help  
keep children healthy  
before and after they  
receive a transplant.

Vaccines can  
prevent infections  
that can increase  
time to transplant.

Don't delay – talk to your child's  
doctor today!

Ask what vaccines  
are recommended for  
your child.
